Professional Summary

Blockchain and backend engineer with 3+ years of experience building Web3 infrastructure, EVM transaction relayers, cross-chain systems, smart contracts, and scalable backend services. Hands-on experience with Solidity, Node.js, TypeScript, Python, EVM networks, Aptos, BNB Chain, account abstraction, and event-driven architecture. Delivered measurable improvements including 100+ blockchain transactions per minute, approximately 50% lower smart-contract infrastructure costs, and 90% fewer RPC requests per page load. Experienced in production APIs, distributed systems, cloud deployments, and reliability-focused transaction processing.

Technical Skills

Blockchain / Web3: Solidity, EVM, Smart Contracts, Cross-Chain Bridges, Transaction Relayers, ERC-4337, WebAuthn, OpenZeppelin, Chainlink, The Graph, GraphQL
Networks: Aptos, BNB Chain, Arbitrum, Polygon, Ethereum-compatible networks
Languages: TypeScript, JavaScript, Python, SQL
Backend: Node.js, NestJS, Express.js, Django, REST APIs, WebSockets, Socket.IO, Event-Driven Systems
Data: PostgreSQL, MySQL, MongoDB, Redis, Database Design, Query Optimization
Cloud / DevOps: AWS EC2, Docker, Linux, Nginx, Jenkins, CI/CD
Tools: Hardhat, Foundry, Slither, Git, GitHub, Postman, Locust

Professional Experience

Yachii India Pvt. Ltd. 2026 – Present
Software Engineer – Backend *India*

- Build and maintain production backend services for YChat using Node.js, TypeScript, REST APIs, Socket.IO, PostgreSQL, and Redis.
- Develop modular service workflows for authentication, real-time communication, subscriptions, usage management, and platform administration.
- Implement event-driven workflows, server-authoritative state, concurrency-safe limits, session lifecycle handling, and persistent data management.
- Maintain API contracts, validation, authorization, error handling, and backward compatibility while extending existing production systems.

Arivo Jan 2026 – Aug 2026
Founder & Full-Stack Engineer *India*

- Built a personal-finance product MVP, owning backend services, frontend interfaces, REST APIs, database models, integrations, deployment, and releases.
- Designed modular services for financial data processing, transaction workflows, financial insights, notifications, and third-party API integrations.
- Developed AI-assisted backend workflows and managed cloud deployment, database architecture, debugging, and production operations.

KGEN Feb 2025 – Nov 2025
Web3 Engineer *Bengaluru, India*

- Designed and deployed a cross-chain bridge between Aptos and BNB Chain, including backend monitoring and state synchronization across heterogeneous networks.
- Built an EVM transaction relayer processing 100+ transactions per minute with nonce management, retries, transaction monitoring, and failure recovery.
- Reduced smart-contract infrastructure costs by approximately 50%, from about $9,000 to $4,000–$5,000 per month, through storage optimization and execution-path refactoring.
- Developed staking, swap, and wrapper contracts using OpenZeppelin Transparent Proxy upgradeable architecture.
- Implemented transaction validation, retry handling, monitoring, state synchronization, and failure recovery across blockchain networks.

ETHA Labs Jun 2024 – Dec 2024
Blockchain Full-Stack Developer – Contract *Remote*

- Implemented WebAuthn passkey authentication with ERC-4337 account abstraction to replace password-based authentication.
- Reduced frontend RPC requests by approximately 90%, from 50 to 5 per page load, using WebSocket subscriptions and event-driven updates.
- Integrated The Graph Subgraph and GraphQL to index on-chain events and serve position and order-history data efficiently.
- Developed backend and frontend features integrating APIs, authentication, event-driven updates, and on-chain services.

Cruize Finance Jun 2022 – Mar 2023
Founding Team / Protocol Developer *Remote*

- Developed Django REST APIs handling 10,000+ requests per minute and validated throughput using Locust load testing.
- Built and deployed smart-contract infrastructure across Arbitrum, Polygon, and Mumbai networks.
- Configured AWS, Nginx, and Jenkins CI/CD for application deployment and continuous delivery.
- Developed backend services for financial applications with a focus on data consistency, performance, and reliable integrations.

Selected Projects & Achievements

- **Chainlink Hackathon:** Integrated Chainlink price feeds into a DeFi protocol to help users hedge against asset volatility.
- **Buildspace Hackathon:** Designed an end-to-end encrypted health-record system using encryption and decryption nodes to support data privacy.
- **Agentic AI Trip Planner:** Built a Python application using LangChain, LangGraph, LLM tool calling, structured state, and external APIs.

Education

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV) 2023
B.Tech *India*
